

# WIRSTWOOD MULTISENSORY TRAINING

FLINSHEET NUMBER - 5. UV LIGHT

## GLOW-WORMS RULE

ULTRA VIOLET LIGHT (UV) LIGHT IS THE MOST EFFECTIVE WAY TO MAKE FLUORESCENT OR WHITE OBJECTS GLOW. HOW BRIGHT WILL DEPEND ON THE POWER OF THE UV, FOR EXAMPLE A 4FT TUBE WILL MAKE THINGS GLOW AROUND 40 TIMES BRIGHTER.

THE UV LIGHT WE USE IS IN THE U.V.A. FREQUENCY AND IS KNOWN AS 'BLACKLIGHT'. IT IS BEST USED IN A DARKENED SPACE FOR THE MAXIMUM IMPACT; BUT IT DOES NOT HAVE TO BE A DARKENED ROOM. AN UMBRELLA IN A SHADY CORNER OR A LARGE BOX CAN CREATE A DARK SPACE AND CUT OUT UNWANTED VISUAL CLUTTER.

BLACK AND WHITE MOBILES CAN BE CREATED TO SHOW A HIGH COLOUR CONTRAST, WHITE PAPER PLATES WITH FLUORESCENT FACES. FACE PAINTING WITH FLUORESCENT MAKEUP OR SUN BLOCK.

WHITE GLOVES CAN BE USED TO ENCOURAGE EARLY BODY AWARENESS OR HAND EYE CO-ORDINATION.

FLUORESCENT SHAPES CAN ENHANCE ACTIVITIES DEVELOPING THEMES ABOUT EARLY MATHEMATICS, LETTERS, NUMBERS AND SYMBOLS.

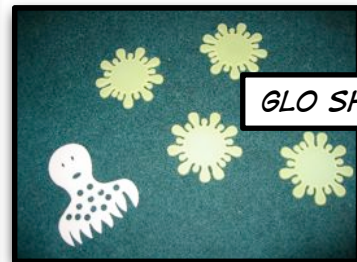

MANY BOOKS WILL GLOW UNDER UV AND CAN MAKE STORIES COME TO LIFE TO CREATE AN INCLUSIVE LITERACY FOR THOSE STUDENTS WHO NEED THAT EXTRA VISUAL CLUE.
